

- Open report in PowerBI Desktop.
- Click “Transform Data” → “Edit Parameters”

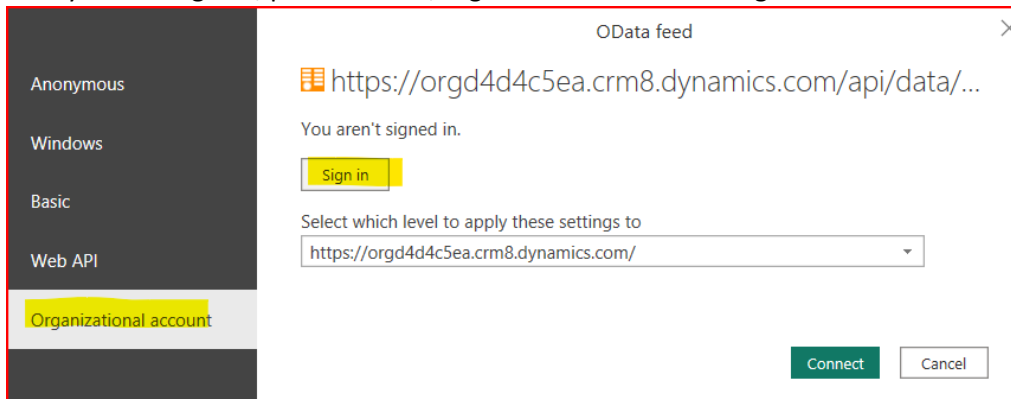

- Change “Environment URL” with respective BUPA environment url → Click OK  
Update highlighted with actual url  
Example URL = <https://ketanpsa.crm8.dynamics.com/api/data/v9.2>

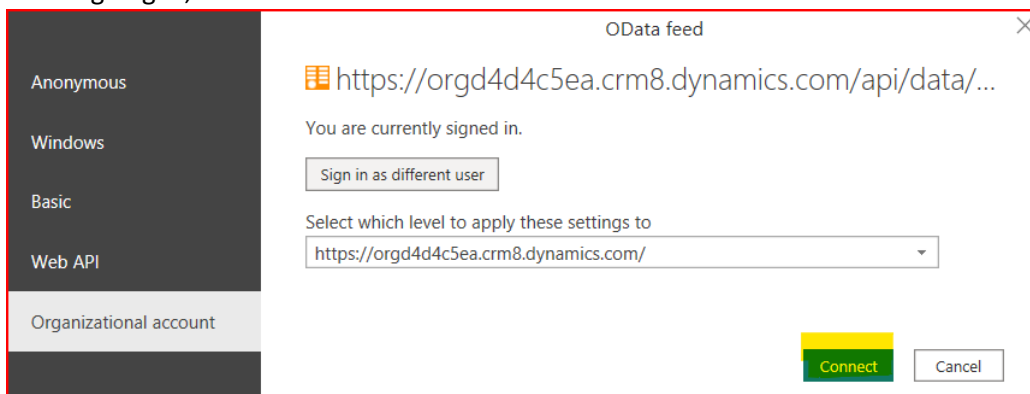

- Click Apply Changes, so that report will update data for specified environment.

- It may ask for sign in , please select , organisation account → Sign in

- After signing in, click “Connect”

- Power BI will refresh the data, it can take some time to refresh, based on environment size, for example, production can take upto 40 mins, whereas DEV can execute in 5 mins.
- Once done you can export the data from power BI as below.
